Goes where others cannot.

PERFORMANCE

**The Daily 4x4 enters the arena.
The comfort of a road-going Daily with all
the benefits of an off-road vehicle.**

PERFORMANCE

Icy surfaces, uneven ground, steep gradients and slippery tracks. None of these scare the new Daily 4x4, designed to meet the needs of those who work in difficult situations at all times: over rough tracks, unfinished roads or even where there are no roads at all. In the light vehicle category, the Daily 4x4 stands out because it offers the best combination of payload and off-road performance.

The Daily 4x4 reflects and adds to the values of the new Daily. It multiplies its sturdiness and its quality as an ideal worker; it offers power and comfort in two models, two wheelbases and two versions: 3-seater single cab mainly for goods transport; crew cab with five seats plus the driver to allow the transport of people and goods.

Daily 4x4. Outstandingly capable. Anywhere.

< **Close proximity mirror and light clusters**

A third mirror has been designed to help the driver during close proximity manoeuvres. The front bumper is in ultra-strong steel, with integral light clusters

< **Footboards**

Easy access to the cab from both sides due to user-friendly steel footboards

< **Underrun bar**

On particularly demanding off-road routes, the bar may be raised by operating a release lever, thus considerably increasing the vehicle exit angle

DESIGN AND FUNCTION.

The Daily 4x4's styling is based on that of the Giugiaro-designed Daily, but combines its good looks with the practicality of typical off-road features. The cab is raised in relation to the frame to allow extensive suspension travel. Because the cab is higher, **footboards** are provided for easier access and positioned so that they do not hinder the off-road performance. A **close proximity mirror** is present on the passenger side to improve visibility whilst manoeuvring.

Direction signals, sidelights and high beams are housed inside the upper **light clusters**.

The generous front bumper, which houses and protects the low beam and fog light assemblies, is in special steel developed with a specific surface treatment that increases

its resistance to minor impact and abrasions. Generous plastic side strips protect the side doors. The spare wheel is fixed to the side of the frame by means of a practical winch so that it does not hinder vehicle mobility.

The fuel tank, in ultra-sturdy plastic with a lockable safety cap, is located in a protected area where it is safeguarded against impact. A rear **underrun protection bar** is fitted to protect the vehicle and passengers in the event of a collision.

During extremely demanding off-road routes, the bar may be raised to make the vehicle even more agile during difficult manoeuvres.

The Daily 4x4 is equipped with special rear wings fastened to the frame to make it easier to facilitate body and equipment installation.

The toughest routes on the outside and all the driving comfort of a road vehicle on the inside. The Daily 4x4 cab is built for quality of life on board, offering space and ergonomics in both versions, single and crew cab. A long list of equipment offers practical solutions.

**Tackle the worst roads.
In the best way. In comfort.**

COMFORT

< **Door panels**
In material that is soft to the touch with a user-friendly handle and generous door pockets

< **Upper oddment compartment**
A practical oddments shelf is available, including a third DIN standard slot

COMFORT COMES FIRST.

Style and ergonomics, in short, are the characteristics of the Daily 4x4, where comfort is high and the finish is to the same standard as on the road version. The vehicle is easily accessible due to convenient **grab handles** in ultra-sturdy material positioned on the 'A' pillars and on the base of the passenger seat.

To offer the best comfort, the Daily 4x4 comes with a wide range of seats for the driver and passengers: the driver can choose from a 3 way adjustable seat with lumbar support right up to a heated, suspension seat for heavy duty applications. Passengers have a choice between single seats or a bench with a lap belt or a three-point belt. The crew cab version also offers a comfortable and practical rear bench with seat belts and head restraint that can accommodate up to 4 passengers. A choice of three different trims is available: standard cloth, comfort cloth and vinyl, ideal for more demanding missions. Plenty of space is available inside the cab and between the seats, which is made more practical by a host of storage compartments on the dashboard and in the door panels, plus bottle holders, cup holders and a multipurpose box with two compartments for documents and food.

> **Grab handles**
Positioned on both sides to make it easier to get into and out of the cab

> **Multipurpose box**
Two convenient compartments, the lower one is used for documents while the upper temperature-controlled compartment is for food

- > **Ergonomic**
Everything in the right place with the controls clearly visible and within easy reach. Electric windows are fitted as standard throughout the range

- > **Practicality**
The controls of the three differential locks (central, rear and front) and the power take-offs on the transfer box are located in a user-friendly central position

ERGONOMIC AND PRACTICAL.

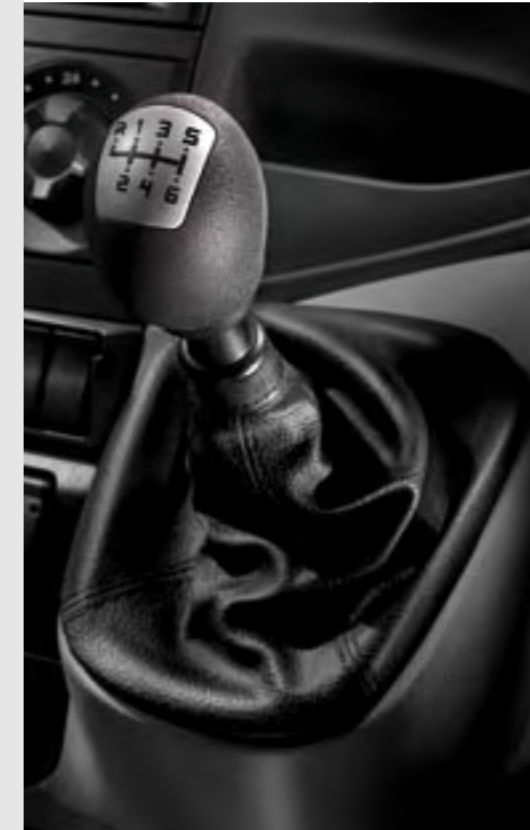

From an ergonomic viewpoint, the Daily 4x4 offers great qualities: The most comprehensive array of instruments and a practical layout of controls with switches that are within easy reach to make driving more comfortable. To ensure easy gear changes, the **gear** lever is located in the middle of the dashboard while the **crawler gear levers** are located on the floor between the seats to make it easier to cross the cab. To ensure greater **practicality**, the dashboard

also houses the tachograph, controls for the three differential locks and the power take-off (PTO). The dashboard houses a **multifunction display** with a trip computer that allows drivers to display information that is useful during routine trips, such as time management, distance, fuel consumption, outdoor temperature and important information for servicing and repairs. Leisure time is also catered for with an MP3 CD radio, with satellite navigation system and hands-free operation.

- > **Power Take Off (PTO)**
The Daily 4x4 offers up to four power PTOs in the central transfer box and one in the gearbox

- > **Gearbox**
The gearbox is six speed with overdrive

- > **Crawler gear levers**
In the middle on the floor for cross cab access

- > **Multifunction display**
Generous and easy to read, with a trip computer that allows the driver to monitor all the required information

Stand back and admire the engine power, which is the best in its class. An extremely rugged frame, the exclusive heritage of the Daily. Make way for the safety of an excellent braking system. No goal is unreachable, no route is impassable: you have the Daily 4x4.

A structure of maximum strength combined with super-reliable mechanical systems and record-breaking power.

UNSTOPPABLE

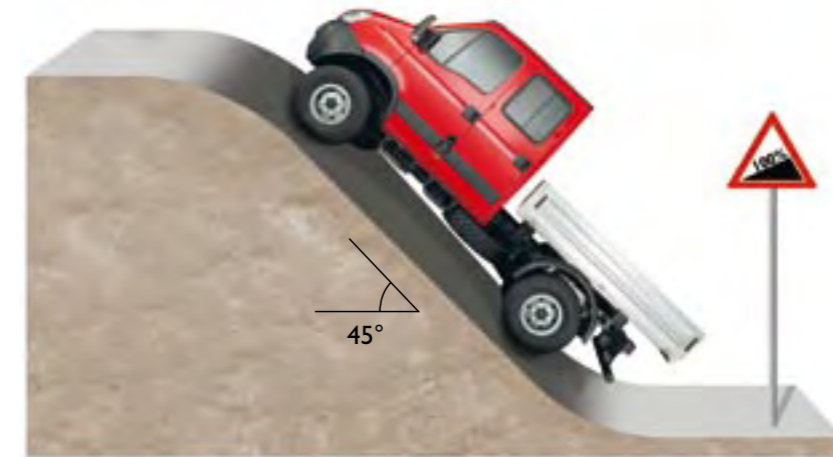

OUTSTANDING CAPABILITY

You need strength to withstand the toughest routes. You need ideal suspension, axles and frame to overcome incredible gradients and ditches. You need all the technology and strength of the Daily 4x4 to tackle the most difficult situations and workplaces. Off-road performance and on road driving practicality.

The Daily ensures a turning radius of 6.4m for the short wheelbase version and 7.6m for the long wheelbase.

Dash-mounted control, with acoustic signal: to turn off the engine cooling fan and allow the vehicle to negotiate fords in complete safety.

Vehicle fully laden * with overrun bar closed

STURDY.

The great strength of the Daily 4x4 is its frame. It is testament of Iveco's experience in the field of industrial vehicles.

None comes as rugged as the Daily 4x4.

The frame is made up of tubular rails and cross members in high-strength steel (fe490), with a 5 mm C-shaped cross-section.

Closed along almost the entire length of the rails by a 4 mm plate, the end result is a sturdy structure able to withstand the heavy duty twisting and fatigue stresses typical of quarries, building sites and extreme off-road uses.

It has also been designed to offer the maximum simplicity of body installation and high safety standards.

> **Front suspension**

At the front, the parabolic leaf springs are 3-leaved

> **Rear suspension**

The Daily 4x4 is also available with a heavy duty 4 leaf spring suspension system

> **Wheels**

For mixed use, the vehicle is equipped with steel rims with 9.5 R17.5 tyres, while for off-road use over demanding terrain, the tyres are 255/100 R16 with special pads

> **Disc brakes**

The 297 mm disc brakes at the front allow high performance, even over difficult terrain

OFF-ROAD SUSPENSION.

The Daily 4x4 is fitted with **suspension systems** that are particularly well-suited for demanding off-road applications. The longitudinal parabolic leaf springs offer high flexibility with a wide range of travel. The front and rear axle and leaf spring installation ensures stability and is highly articulated to ensure traction under demanding off-road conditions. The telescopic shock absorbers and antiroll stabiliser bars combined with the rigid rear axle allow outstanding performance over all types of terrain and gradients without detracting from load capacities and confirming that the Daily is at the peak of its category.

The maximum permitted loads on the axles:
 For the 3.5 tonne model: 2,250 kg at the front, 2,800 kg at the rear.
 For the 5.5 tonne model: 2,450 kg at the front, 3,700 kg at the rear.

A MATTER OF SAFETY.

Over uneven and steep routes, a high quality braking system is essential for safety purposes and, in this case too, the Daily 4x4 shows its mettle as an off-road vehicle. The system is hydraulic with a vacuum brake servo acting on all four **wheels** with independent circuits. The front **disc brakes** are combined with rear drum brakes while the parking brake works on the rear wheels. During more demanding braking operations

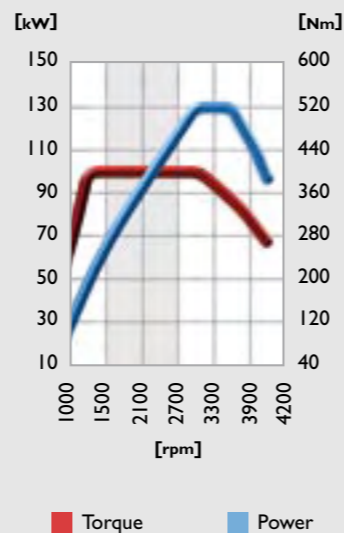

and more difficult manoeuvres, the ABS ensures that the vehicle is brought to a halt in complete safety, reducing the stopping distances and maintaining vehicle directional stability. Over ground with poor grip and non-compacted ground such as mud and snow, the ABS is automatically deactivated when it is necessary to engage the differential lock. A mechanical load proportioning valve ensures the distribution of braking force.

< **HPT Euro 4 engine**
 3.0 litre engine delivering 176 bhp with reduced maintenance, extraordinarily flexible, powerful and environmentally friendly, Euro 4 type approved with a DPF particulate trap as standard

v **Performance**
 Power 128 Kw (176 bhp) at 3,500 rev/min, torque 400 Nm, constant between 1,250 rev/min and 3,000 rev/min

v **Differential lock**
 The three differential locks are engaged and released by a central electronic control unit and the driver may decide to activate them even when the vehicle is in motion by means of special switches on the dashboard

> **Transfer box**
 The transfer box allows four-wheel drive with the torque distributed 32% to the front and 68% to the rear. When combined with the six speed gearbox, this provides 24 forward gears plus four reverse gears

FOUR-WHEEL DRIVE.

The Daily 4x4 is called upon to perform demanding tasks under difficult conditions. For this reason, Iveco opted for a permanent four-wheel drive with **differential lock**. Outstanding performance is guaranteed by a system (with central transfer box) that allows continuous four-wheel drive; torque distribution of 32% to the front axle and 68% to the rear offers the right grip over all terrain. The 6 speed overdrive gearbox is coupled to the central **transfer box** with two reduction units in order to obtain 24 forward ratios: 12 for mixed routes and 12 for off-road routes (6X2 + 6X2), and four reverse gears. When the vehicle is in motion, the first synchronised reduction gear (half gear) may be engaged while the second reduction gear, for the most extreme off-road applications, can be engaged only with the vehicle stopped. The Daily 4x4 can tackle every terrain, even the most slippery, in safety. This is guaranteed by the action of the three differentials (central, front and rear) that lock together the front and rear axles and also across both front and rear axles so that all wheels drive together. In this way, even over difficult surfaces where it is possible to lose grip, the wheels can transmit movement to the vehicle, allowing it to overcome any road surface situation with agility. On the Daily 4x4, an electro hydraulic unit governs the sequential engaging and disengaging of the three differential locks, deactivating them automatically on the basis of speed in order to ensure the greatest safety and reliability.

REAR AXLE

TRANSFER BOX

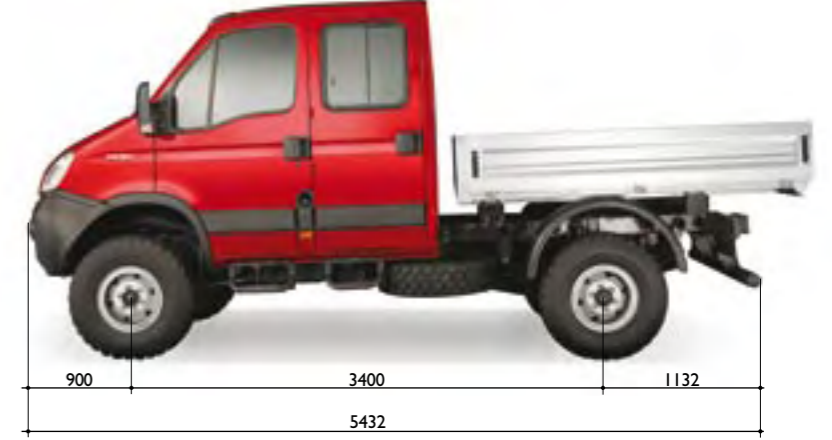

DRIVE AXLE

REAL POWER FOR REAL WORK.

Allowing the potential of the Daily 4x4 to be exploited to the full, the vehicle uses the highest performing engine in its class, with a 3 litre **HPT** Common Rail producing 176 bhp, 4 cylinders, 16 valves, twin overhead cam shaft, variable geometry turbocharger and intercooler. This offers superior **performance** and reliability, even under the most difficult conditions. The secret of the high-performance and exceptional flexibility from low speeds lies in a torque of 400 Nm – that remains constant between 1,250 rev/min and 3,000 rev/min – ensuring a high driving comfort and precise control of fuel consumption. The engine is a high efficiency direct injection diesel with EGR and particulate trap (DPF) as standard to ensure respect to the environment and the toughest exhaust emission standards, perfectly compatible with use around town. The advanced common rail injection system guarantees continuous filter regeneration even when the engine is not expending any effort, for example when the power take-off is used with the vehicle parked.

THE RIGHT CHOICE.

Daily 4x4: An off-road vehicle tailored to your needs. Its versatility makes it ideal for every job and application, its power allows for far from ordinary performance, its reliability represents the pinnacle of safety even under the most demanding situations.

Available in two models for gross vehicle weight (3.5t and 5.5t) and wheelbase (short, from 3,050 mm and long, from 3,400 mm) and two cab versions: single 3-seater or crew cab with 6 seats plus driver. It is equipped with an efficient and reliable engine that delivers optimum power and torque over a wide speed range that ensures maximum tractability under difficult conditions. In practice, the highest-performing engine in its class. Designed to increase productivity and reduce running costs by optimising the cost of conversion, service downtime and fuel consumption.

A vehicle with high off-road performance but uncompromising when it comes to comfort, offering the same standard as road vehicles.

VERSATILE

Exceptional versatility in a far from ordinary off-road vehicle

DAILY 4X4 AND BODY FITTING.

The vehicle is easy to adapt due to various design features, including its ladder type frame, power take-offs and electrical system. The chassis frame has been designed with its upper surface free to accommodate the widest imaginable range of bodies. It is equipped with special mounts designed and tested by Iveco and appropriately spaced to ensure that the body is properly fastened and to facilitate fitting and removal operations with greater safety, even with high stress applications. The box sectioned structure of the front cross member of the frame is ready for the fitting of front-mounted equipment for road maintenance. The vehicle may be equipped with **Power take-offs (PTOs)** on the gearbox or behind the transfer box with hydraulic engagement and 4 different types of optional attachment for the operation of external equipment by means of hydraulic pumps or propeller shafts. To make the work of bodybuilders easier, the vehicle electrical system is equipped with a CAN line interface to make it possible to take off signals and issue commands to the vehicle. The vehicle's electrical power is guaranteed by a 110Ah battery combined with an 120A alternator or, as an option, a 140A alternator.

The Daily 4x4 excels in versatility. The vehicle is used for special off road applications such as civil protection, emergency vehicles and road building or is also ideal for many other missions or even for leisure use. The list is endless. Here are just a few examples, but the vehicle's versatility and potential for conversion and application do not end here. The Daily 4x4 is ideal as a fire fighting vehicle, to fight bushfires over the most impenetrable terrain where larger vehicles cannot reach. Its off-road attributes and transport speed allow it unbeatable performance in all cases of emergency such as floods or earthquakes, civil protection and emergency services. Because it is able to carry men, materials and heavy equipment anywhere, it is perfect in the **building** sector for heavy duty work in sites that are difficult to reach. Strength, resistance and flexibility are the main characteristics of the Daily 4x4 frame that, when combined with the different types of power take-off available, make the Iveco off-road vehicle ideal for road maintenance, even in winter (with a snow plough and gritting attachment) and for town councils that find it a flexible, reliable and multifunctional workhorse in its various conversions.

ORIGIN.

A vehicle like the Daily 4x4 offers the highest levels of reliability, robustness and functionality, but that is still not enough.

Iveco wants to give you much more. It wants to represent a constant, professional presence, full of attention to its customers. This means “Origin 100% Iveco”.

100% SELECTION - The excellence of the process starts from the raw materials that every Iveco product is built with, selected by the strictest quality standards.

100% RELIABILITY - Iveco only works with suppliers that guarantee high quality levels and certified process.

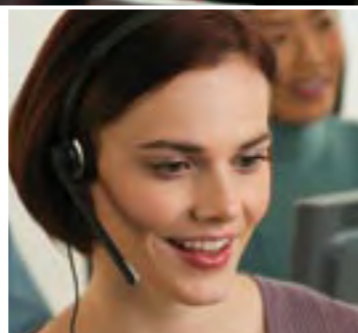

100% SAFETY - Certified and guaranteed, Iveco Original Parts guarantee that performance

is maintained in time, and they are the only ones to preserve the value of your vehicle.

100% CONTROL - All Iveco products and services pass strict Quality Controls at every stage of the process.

100% EXPERIENCE - Iveco makes a far-flung professional network available to you, to guarantee the highest level of service, 24 hours a day, 365 days a year.

100% Customer satisfaction. A quality process that targets a single goal: satisfying Iveco customers 100%. All this is ORIGIN 100% IVECO. The will and determination to transmit to Iveco customers all the safety and serenity they deserve. Always and everywhere.

^ **Customer Centre**
 Hundreds of selected operators ready to respond to your call instantly, to help you solve any problems. Wherever you are.

SERVICES.

Original Parts. Iveco original parts guarantee that the performance and value of your Daily 4x4 are maintained in time.

Choosing Iveco original parts means trusting the quality of the manufacturer, and the professional skills of expert operators who are familiar with every detail of the vehicle, for a vehicle that is always efficient.

The service points all over Europe are able to assist you wherever you go, and thanks to a prompt, efficient distribution network, any part will be delivered within 24 hours.

A further demonstration of seriousness and reliability on the part of a leading group, which has succeeded in making quality and service its trump cards over the years.

Specialist technicians. No one knows your Daily 4x4 better than the people who built it. Which is why Iveco constantly organises training and refresher courses for its technical staff, to guarantee maximum efficiency and capability in solving problems, backed up by cutting-edge diagnostic systems and top quality service. All in order to get the vehicle back on the road as soon as possible, because the customer’s needs always come first.

Iveco Shop. Design, technological innovation and performance are the essential values of these products. This vast range of accessories offers new solutions designed to satisfy practical and aesthetic, stylistic and aerodynamic demands at one and the same time.

A range of articles worthy of the vehicle’s performance in every way: products designed to customise your vehicle cab with class, making it a welcoming environment and enhancing the exterior, while guaranteeing driving safety and comfort in traffic.

A catalogue that illustrates the vast range of Iveco shop accessories is available from the Iveco network.

Programmed maintenance. With the Iveco Elements Programmed Maintenance Programme, you will always be sure that your Daily 4x4 is in perfect condition and ready to use.

The various types of contract guarantee:

- **Transparent costs**, you will only pay what you agreed, with no surprises;
- **Safety and availability** of the vehicle, so that you are free to concentrate on the job at hand;
- **A vehicle that is always efficient**, thanks to the top quality and skills of the Iveco network;
- **Higher value of used vehicles**, you can be sure that your Daily 4x4 has a higher residual value when it is time to change it;
- **Fewer administrative expenses**, the maintenance of your fleet will be fully programmed, so there will be fewer invoices and less administrative work.

Non-Stop Customer service. Solve your problems with one telephone call. In an emergency, you only have to call the Iveco Customer Centre where an operator, speaking your own language, will collect all the necessary data and get the closest workshop on the job, anywhere in Europe. The Customer Centre will also monitor the operation until the vehicle is repaired.

**IVECO
CAPITAL**

IVECO CAPITAL: YOUR GATEWAY TO THE WORLD OF IVECO

For over 20 years we have supported the sales of Iveco products, funding the complete range of light, medium and heavy commercial vehicles with tailor-made financial services. Our principal aim is to help customers fund their vehicles in the most beneficial manner for their individual operations, using our expertise in the industry and financial strength as a member of the **Iveco Group**, which is in turn part of the Fiat Group - one of the world's largest organisations.

Specialist knowledge and expertise.

Our products are available across a nationwide network of Iveco dealers and have been created by industry experts who understand every aspect of the road transport business. This ensures we offer you tailor-made solutions that enable you to make your commercial vehicles work hard for your business, whilst benefiting from a bespoke financial solution designed to meet your company's specific requirements.

A truly global partner.

Iveco Capital operates in **14 countries** and provides support to Iveco customers in all of the main European markets, supplying a range of flexible financial products and services tailored to help operators realise the maximum benefit from their commercial vehicle fleet. To-date Iveco Capital has

provided its services to more than 55,000 customers, ranging from owner-operators through to multi-national blue-chip companies. This has seen in excess of 112,000 vehicles delivered to customers supported by a range of financial services from Iveco Capital, including Contract Hire, Finance Lease, Hire Purchase and Operating Lease.

Hire purchase: a tailor-made solution.

Hire Purchase is popular with operators looking to acquire ownership of the vehicle. It can cover up to 100% of the vehicle's selling price and enables you to take delivery of the asset straight away, but with payments spread over the life of the vehicle and the option of keeping the asset at the end of the term for a nominal fee. Payments can be tailored to suit the cash flow needs of your business, making budgeting easier as the payment structure is agreed with you at the outset. Acquiring new vehicles under a Hire Purchase agreement also has tax advantages, in that you claim the writing down allowances and the interest elements of the repayments are allowable against taxable profit.

Finance lease: your multiple benefits.

Finance leases enable you to lease Iveco vehicles without making a capital outlay that impacts upon your balance sheet,

allowing you to dedicate your financial resources to your core business. It means that vehicles are hired to you for a fixed period without the option of ownership, and at the end of the primary period you may choose to continue to rent the asset for a further period at a nominal rate or to act as an agent in its disposal. This means you have the option to sell the vehicle on our behalf and keep the majority of the proceeds. Furthermore, for Finance Leases of five years or less, as Iveco Capital remains the owner of the asset, we claim the writing down allowance and the benefit is passed to you in your rental payments. Your cash flow is eased still further because you pay VAT on the monthly repayments, not on the principal purchase cost. In addition, you claim tax relief on the rental based on the finance charge and depreciation charge through your profit and loss account.

Operating lease: one rental, many advantages.

An Operating Lease is a financial agreement where the asset is treated as an off balance sheet item and Iveco Capital retains ownership of it. Customers selecting this option agree to specific usage parameters for the vehicles at the outset - and assuming these do not vary significantly, the monthly payments and interest are fixed for the duration of your contract. The prime advantage of this arrangement is that rentals are

significantly lower than under a Finance Lease, because the vehicle's residual value is included in the transaction. At the end of the agreement you can choose to extend the agreement or simply return the vehicle to us. For Operating Leases of five years or less, we have the legal and tax title to the asset allowing us to make effective use of writing down allowances, which we pass on to you within the rental. In addition, you claim tax relief on the whole rental amount through your profit and loss account. Your cash flow is eased still further because you pay VAT on the monthly repayments, not on the principal purchase cost.

Contract hire: total fleet solution.

Contract Hire is the complete fleet solution and provides you with off balance sheet funding without the burden of ownership or disposal. It offers all the benefits of Operating Lease financing, comprehensive repair and maintenance, and fleet management services - all of this for a fixed monthly payment, thus improving your budgeting and cash flow projections. With our Contract Hire you will be able to benefit from reduced administrative burden, you will also enjoy peace of mind through the provision of one-stop-shop repair and maintenance solutions that can be flexibly combined with our total fleet management options. Last but not least, our expert team will make sure that your Contract Hire package is tailored to suit your business needs.
